Pupae

who else is having breakfast with you?

Aedes mosquito

Dengue fever is spread by *Aedes* mosquitoes which bite during the day. While your family is enjoying the first meal of the day, make sure there is no *Aedes* mosquitoes around to take a blood meal out of your loved ones.

You can prevent mosquito breeding in your home.

Cover bamboo pole holders when not in use.

Overturn pails and water cans and store them in a sheltered area.

Clear away leaves in scrapper drains.
